

Instructions on how to use the PA

Plug the power in.

The power button is near the power cord. It is a rocker switch with the red led slightly above it.

Plug in the mic to the round 3 prong XLR connections

The volume control for the microphones and aux inputs are directly above each input. Note that the further away the mic is louder the volume can be set before feed back will occur.

Before you power on the PA system please turn down the mic volumes.

Once the mics are in place, turn up the volumes until they are loud enough, if you encounter feed back turn down the mike until it stops, then turn it down just a little more.
